Chi - FCJ Intern Batch 2026

05/05/2026

Basic Information

- **Date:** May 05, 2026
- **Day:** Tuesday
- **Internship Week:** Week 1/8
- **Working Time:** 8:00 - 17:00
- **Mood:** Focused and highly motivated

Today's Goals

- ☑ Document the meeting with AIO Vietnam regarding the MLOps field
- ☑ Discuss financial plan and Swinburne semester fee with Mom
- ☑ Read research papers suggested by Mr. Tuan Anh
- ☑ Request FCAJ admin to add a new member to the internship group

Completed Tasks

1. AIO Vietnam Meeting & MLOps Documentation

- **Description:**
 - Documented the meeting with AIO Vietnam focused on the MLOps field.
 - Reported the overall progress with Admin Vinh.
 - Detailed the knowledge sharing session from Mr. Tuan Anh regarding the master path to MLOps and Cloud architecture.
- **Result:**
 - Established a clear roadmap for MLOps development and cloud integration.
 - Successfully aligned project progress with administration.

2. Financial Planning & Budgeting

- Description:

- Discussed the financial strategy with Mom.
- Calculated the upcoming semester fee for Swinburne.
- Formulated a general plan to optimally distribute funds across bank accounts.

- Result:

- Finalized the semester budget calculations.
- Achieved clarity on personal financial distribution.

3. Research Paper Reading

- Description:

- Studied the papers suggested by Mr. Tuan Anh.
- Focused on the methodology outlined in "How to read a paper".
- Analyzed the paper "Accelerating Model Training in Multi-cluster Environments with Consumer-grade GPUs."

- Result:

- Improved academic literature review techniques.
- Gained technical insights into leveraging consumer GPUs for distributed model training.

4. Internship Group Expansion

- Description:

- Requested FCAJ admin to add Binh Ca to support our internship group's workflow.
- Followed up with Mr. Long from the FCAJ team for processing.

- Result:

- Request was successfully processed by Mr. Long.
- Team capacity expanded to handle upcoming workloads.

Learnings

Technical Skills

- MLOps & Cloud:

- Master path integration of Machine Learning operations with Cloud architecture.
- Distributed model training paradigms across multi-cluster environments.

- **Hardware Optimization:**

- Strategies for accelerating training loads specifically on consumer-grade GPUs rather than enterprise hardware.

Soft Skills

- **Communication & Administration:**

- Effective progress reporting (with Admin Vinh).
 - Coordinating team expansion requests (with Mr. Long).

- **Planning:**

- Personal financial management and budgeting for academic fees.

Challenges and Solutions

Issue 1: Absorbing Dense Technical Literature

- **Description:** The paper on multi-cluster GPU training contained heavy technical concepts.
- **Impact:** Slower initial reading pace and potential information overload.
- **Solution:** Applied the frameworks learned from the "How to read a paper" methodology, utilizing multiple structured passes to extract key concepts efficiently.
- **Result:** Successfully understood the core architecture without getting bogged down in minor details.

Reflection & Insights

What went well today?

- Successfully balanced technical deep dives (MLOps, GPU training) with administrative and personal tasks.
- Coordinated effectively with both the FCAJ team and AIO Vietnam.

Key Insights

- **Technical:** Structured reading frameworks significantly improve the retention of complex cloud and ML documentation.
- **Planning:** Getting ahead on semester fee budgeting provides peace of mind for focusing on the internship.

Tomorrow's Plan

Priority Tasks

- ☐ Review Docker container configurations and swap space for upcoming multi-cluster testing.
- ☐ Map out data pipeline integrations based on the MLOps path discussed today.
